

HOW DOES IT WORK?

InfoSHIP[®] PERFORMANCE

THE ESSENCE OF THE PRODUCT

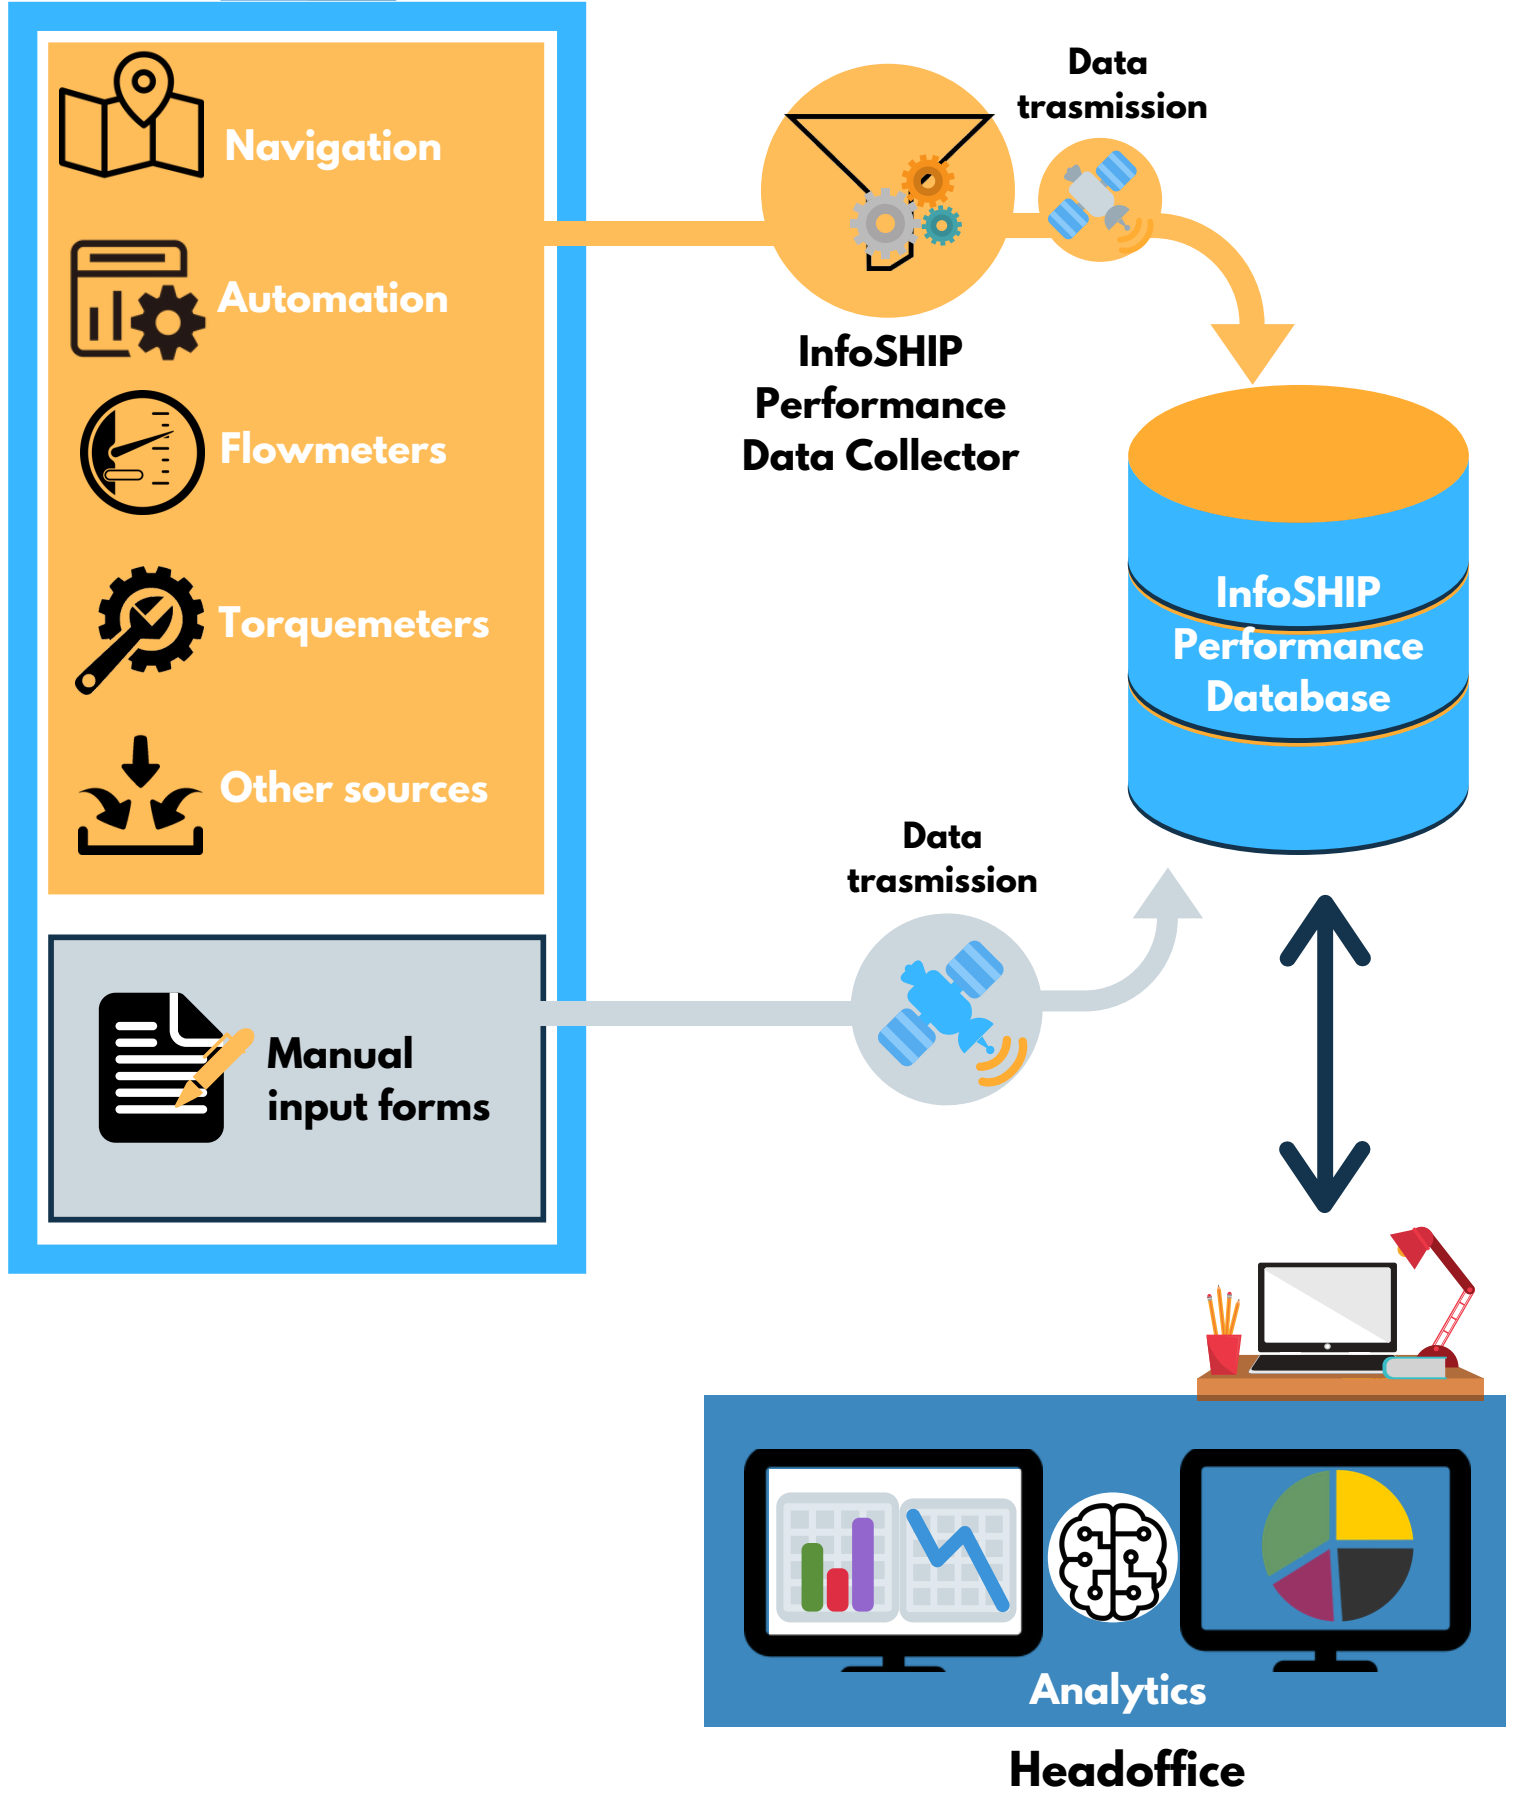

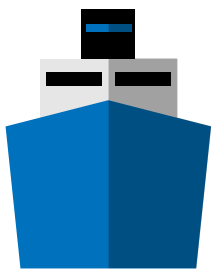

InfoSHIP Performance takes a holistic approach, rather than focusing on one single subject, and covers operations, energy efficiency and environmental topics.

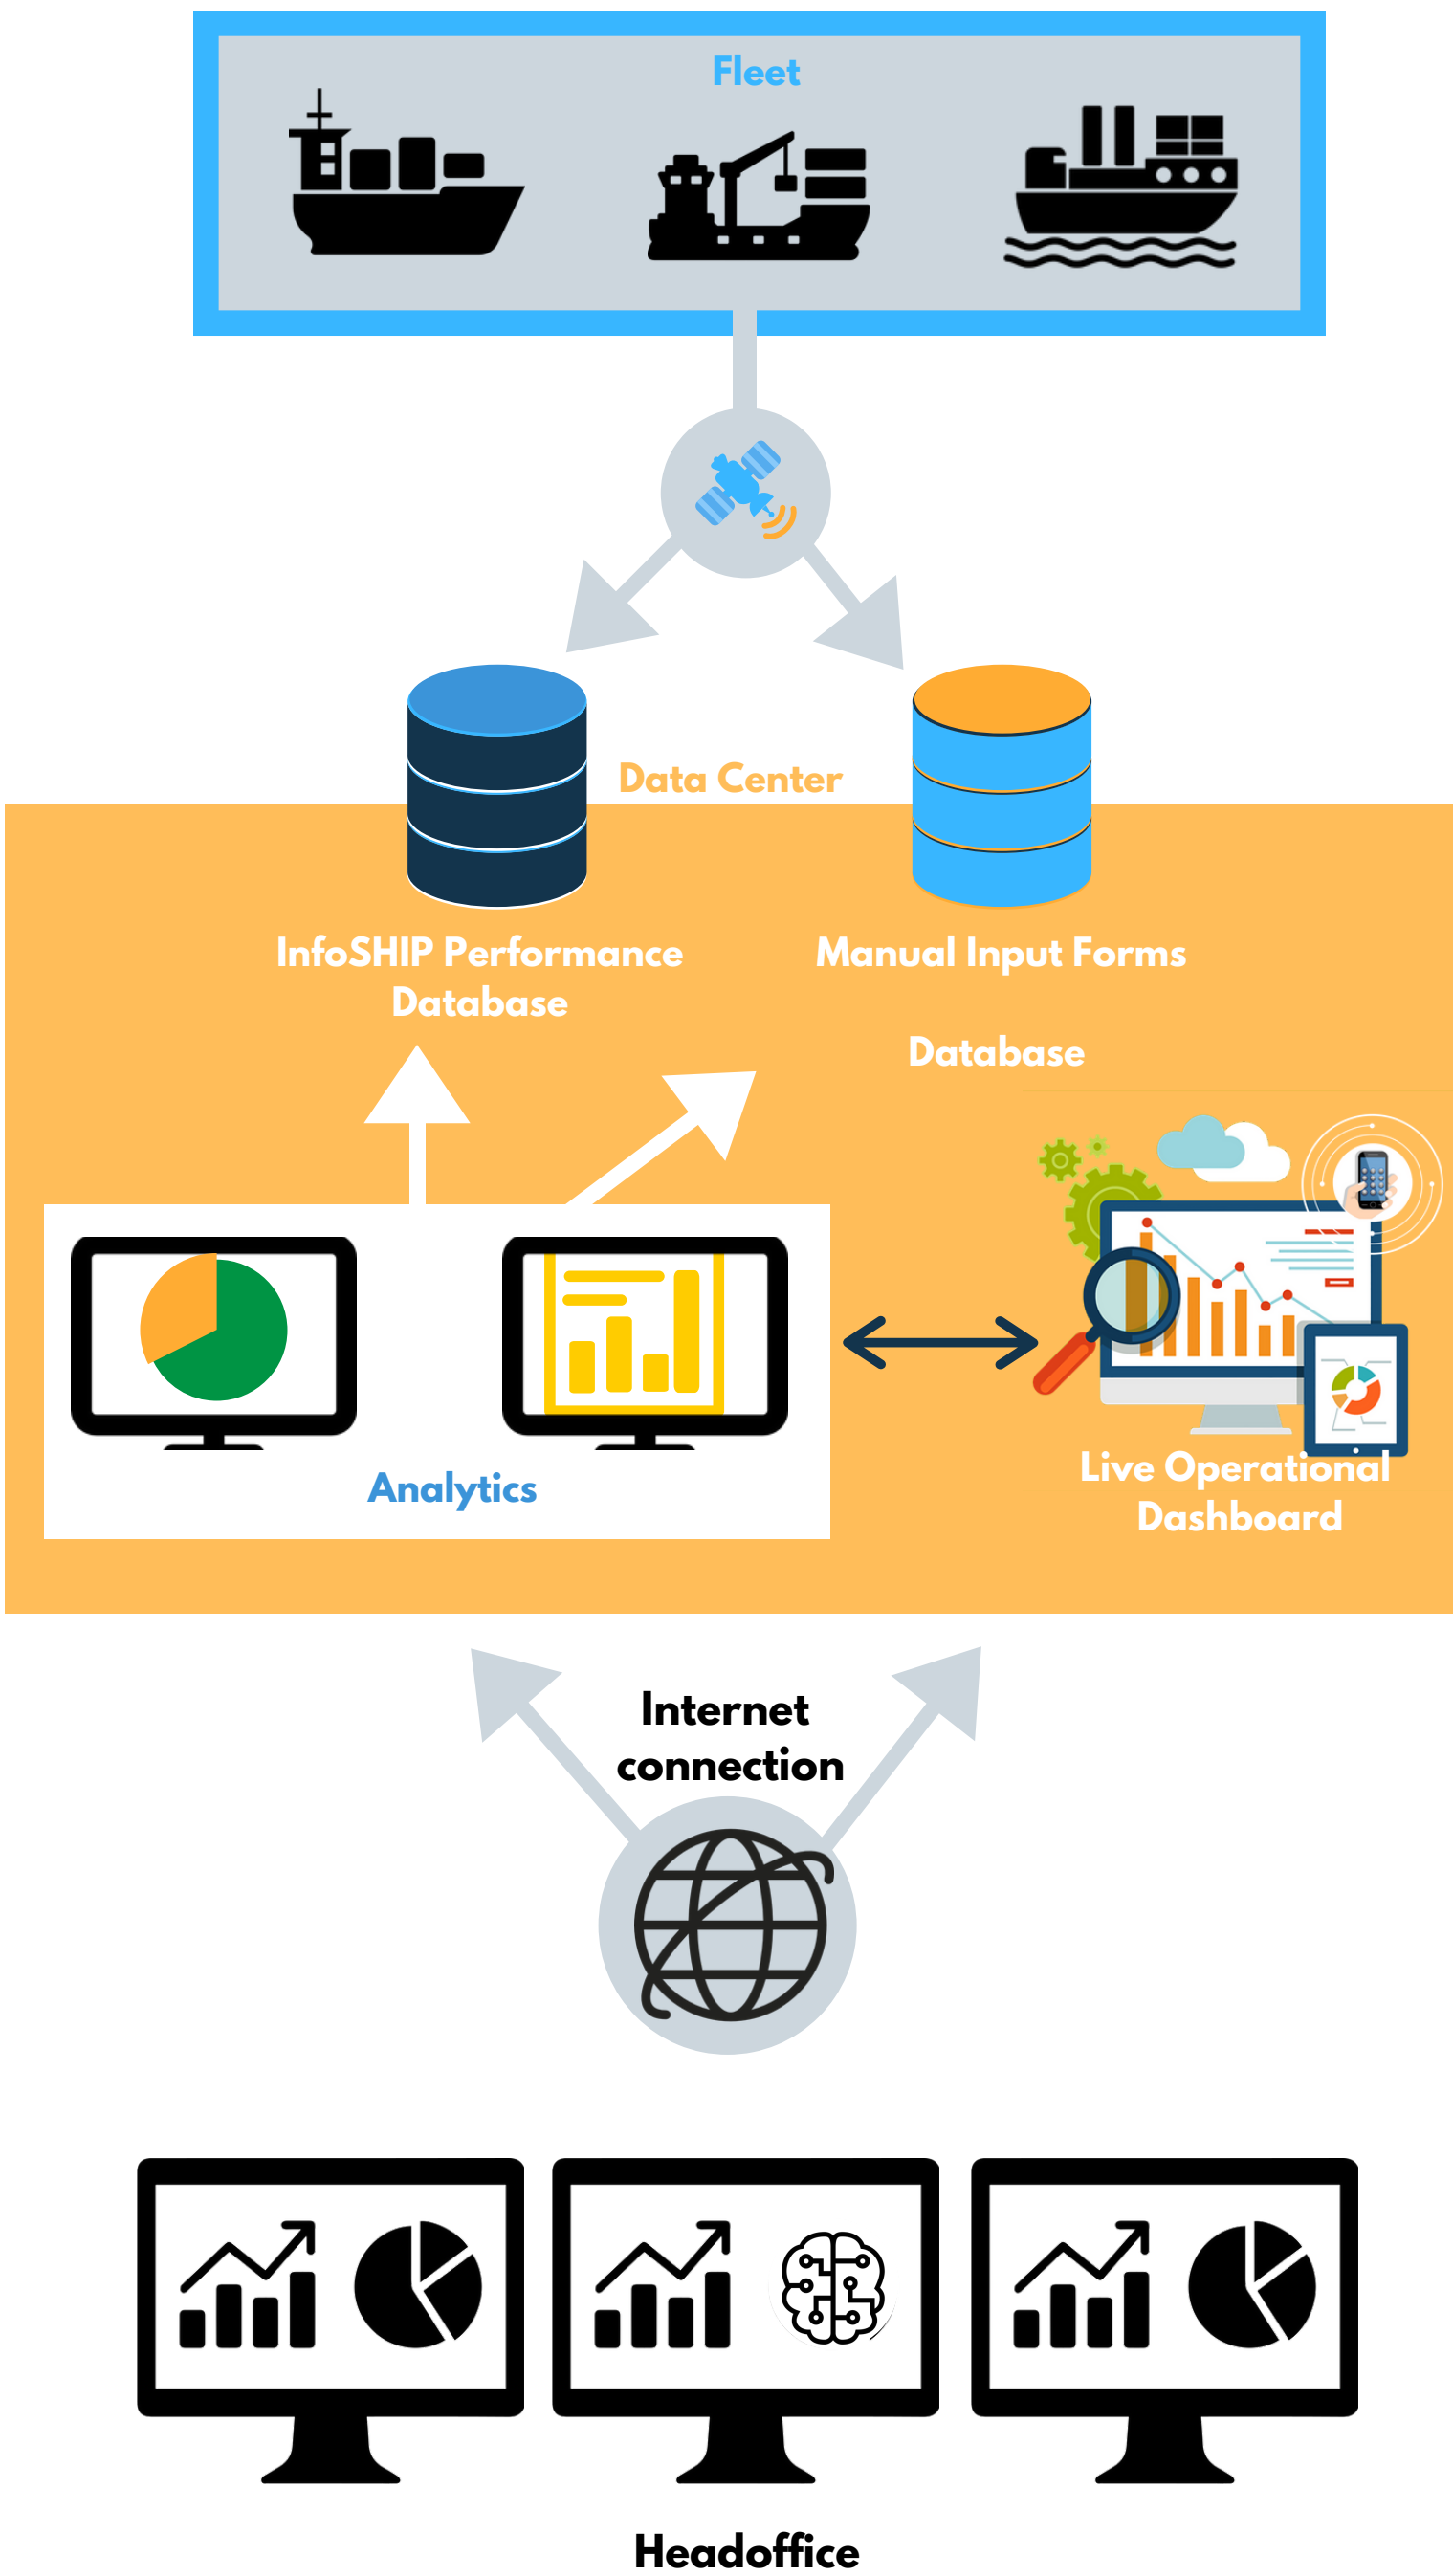

InfoSHIP is a dynamic software that interfaces with new systems and sensors when those in operation are replaced after they degrade or are obsolete. This increases efficiency in information management.

InfoSHIP Performance comes with a standard set of functionalities, providing a clear and comprehensive overview of fleet performance (trends and KPIs), and can also easily include additional measurements upon client request.

HOW DOES IT WORK

The Workflow

The data gathered onboard is transmitted to the on-shore installation through the existing internet connection. This provides Management with Operational Dashboards to monitor the fleet in real-time, and the analytics to perform in-depth statistical analysis.

InfoSHIP Performance is a full-web application to be installed either in a Datacenter or directly in the Cloud, and can be accessed by any connected device (laptop, smartphone, tablet, etc.).
