## InfoSHIP EVO goes also on CMI's tonnage

IB USA signed an agreement to implement the software on the managed fleet

Cruise Management International Inc. (CMI) and IB USA have signed an agreement to implement the InfoSHIP® EVO software on CMI's managed fleet.

The new web based software meets the needs of CMI, a modern and dynamic company which is currently strengthening its position in the market as a Customer Services oriented ship manager.

CMI is focused on enhancing its service offerings to its clients and improving efficiencies across its fleet. "Through investments in people, training, systems and automation we are continuously enhancing our performances" says President & CEO Jim Barreiro de León. "By joining forces with IB - we are committed to strengthening our position in the market as a Customer Services oriented ship manager and are preparing ourselves for our scheduled expansion".

"We are honored to welcome CMI within our customer base and to play a part in their growth process. We strongly believe that InfoSHIP® EVO is the platform that can perfectly meet the needs of a modern and dynamic company like CMI. A system designed to make a significant step up in the technical management of a fleet" commented Alessandro Canepa, President & CEO of IB USA.

Cruise Management International, Inc. (CMI), was formed in 2015 as a continuation of the original International Shipping Partners, Inc. (ISP), formed in 1990, and manages 14 cruise vessels, mainly within the expedition cruise segment for SunStone Ships.

CMI will also manage SunStones' newbuilds; the expedition ice-class cruise vessels will provide much relief to the aging small expedition ship segment of the industry, all with a capacity between 60 and 250 passengers to operate in the expedition and exploration cruise market segment, trading in remote areas of the world.

IB is a highly regarded Asset Management software house and has been active since 1983.

The marine industry is where the Rapallo(Genoa) based firm first got started in the creation of software solutions for maintenance management and, over time, it has branched out into many other sectors which it continues to operate in today (Energy, Process & Manufacturing, Transportation, Healthcare and Real Estate). In the Maritime Market IB boasts a large customer portfolio, including Carnival Cruise Lines, Costa Crociere, Aida Cruises, D'Amico and MSC Cargo.
