

iMarine Software and IB announce partnership

MAINTENANCE & CONTINUOUS IMPROVEMENT

OPERATIONS

🕒 MARCH 7, 2018

iMarine Software and IB Group have signed a strategic partnership agreement to promote both companies' services across the global shipping industry.

iMarine Software manages the cloud-based e-commerce solution, SeaProc, which connects shipowners and operators with over 50,000 global vendors. This provides an integrated platform to enable monitoring and management of all supply chain transactions in a scalable and secure environment, which is hosted by Amazon Web Services.

Services offered by iMarine Software include technical trading, contract management, e-invoicing, logistics, business reporting, and trading rule management.

IB will bring its InfoSHIP vessel management software to the partnership. The technical fleet management software supports shipowners and operators with their daily vessel activities to improve operability and simplify data collection. It includes features such as maintenance, logistics and procurement, quality and safety, electronic logbooks, dry-dock activities, energy performance and risk assessment, to support, digitalise and make technical and operational processes more efficient throughout a vessel's entire life-cycle. InfoSHIP will be integrated to iMarine's SeaProc hub for connection to the 50,000+ vendors.
